INTRODUCTION

This, the 62nd annual report of pests and pathogens found in agricultural quarantine inspections, is the 7th such publication to be assembled and printed from computerized interception records. It summarizes records of exotic living plant pests or pathogens of quarantine significance found in, on, or with plants, plant products, carriers and container vans, imported or entering into the continental United States and Hawaii or the offshore possessions, or moving between these areas.

Accumulated totals for organisms are listed under headings indicating either that the intended use of the contaminated host is consumption or propagation, or that the item is not intended for importation and is designated as nonentry.

Incompletely identified organisms belonging to economic pest groups are included in the lists when they are not taxonomically separable to the degree required for a comprehensive pest risk assessment.

The data for this list, which includes some for the previous years was made from identification records processed during fiscal year 1979. Insect, pathogen, mite, and nematode identifications are made by personnel of the Plant Protection and Quarantine (PPQ), Animal and Plant Health Inspection Service (APHIS), the Insect Identification and Beneficial Insect Introduction Institute (IIBIII), Federal Research, Science and Education Administration, (FR, SEA), and the U.S. National Museum.

Scientific names of listed organisms were reviewed by scientists of PPQ and IIBIII. Scientific and common names of host plants were verified using Hoirtus III, Standardized Plant Names, and other botanical resources.

In this volume, note that a number of changes in nomenclature in the order Lepidoptera have been made to reflect current scientific practice. Grapholita spp. (Tortricidae) for example, are included in this volume under the genus Cydia. The nomenclature changes in Lepidotera and other orders are included below.

PEST ORIGINS

Countries of origin shown for pest interceptions are obtained from the best available sources at the time of interception. Though not meant to be definitive, every effort is made to insure the accuracy of this information.
